NOTES TO FINANCIAL STATEMENTS

Note 1 - Summary of Significant Accounting Policies and Going Concern

A. Accounting Practices

The accompanying statutory-basis financial statements of American Maturity Life Insurance Company (the "Company" or "AML") have been prepared in conformity with statutory accounting practices prescribed or permitted by the State of Connecticut Insurance Department ("the Department"). The Department recognizes only statutory accounting practices prescribed or permitted by the State of Connecticut for determining and reporting the financial condition and results of operations of an insurance company and for determining solvency under the State of Connecticut Insurance Law. The National Association of Insurance Commissioners' Accounting Practices and Procedures Manual ("NAIC SAP") has been adopted as a component of prescribed practices by the State of Connecticut.

A reconciliation of the Company's net income and capital and surplus between NAIC SAP and practices prescribed by the Department is shown below:

Note 20 - Fair Value Measurements**A. Fair Value Measurements**

Fair value is determined based on the "exit price" notion which is defined as the price that would be received to sell an asset in the principal or most advantageous market for the asset in an orderly transaction between market participants. The Company's Separate Account assets are held at fair value.

The Company's investment manager for the Company's general account (a registered investment adviser under the Investment Advisers Act of 1940), with oversight by the Company's Investment Management Department and its Finance and Investment Committee ("FIC"), a committee co-chaired by the Chief Investment Officer and the Chief Risk Officer of the Company, estimates the fair value for financial assets held in the Company's general account and guaranteed separate accounts based on the framework established in the fair value accounting guidance. The Company reviews its investment manager's pricing policy on a periodic basis, with any changes to be approved by the FIC. The Company reserves the right to take exception to its investment manager's pricing of a particular asset and, with FIC's approval, to adjust the price received from its investment manager for that particular asset. The following section applies the fair value hierarchy and disclosure requirements for the Company's Separate Account assets, and categorizes the inputs in the valuation techniques used to measure fair value into three broad Levels (Level 1, 2, or 3):

Level 1 Unadjusted quoted prices for identical assets in active markets that the Company has the ability to access at the measurement date. Level 1 securities include open-ended mutual funds reported in Separate Account assets.

NOTES TO FINANCIAL STATEMENTS

Level 2 Observable inputs, other than quoted prices included in Level 1, for the asset or prices for similar assets. Certain short-term investments reported in Separate Account assets are model priced by vendors using observable inputs and are classified within Level 2.

Level 3 Valuations that are derived from techniques in which one or more of the significant inputs are unobservable (including assumptions about risk). Because Level 3 values, by their nature, contain one or more significant unobservable inputs as there is little or no observable market for these assets and liabilities, considerable judgment is used to determine the Level 3 fair values. Level 3 fair values represent the Company's best estimate of an amount that could be realized in a current market exchange absent actual market exchanges.

In many situations, inputs used to measure the fair value of an asset may fall into different levels of the fair value hierarchy. In these situations, the Company will determine the level in which the fair value falls based upon the lowest level input that is significant to the determination of the fair value. In most cases, both observable (e.g., changes in interest rates) and unobservable (e.g., changes in risk assumptions) inputs are used in the determination of fair values that the Company's investment manager has classified within Level 3. Consequently, these values and the related gains and losses are based upon both observable and unobservable inputs. The Company's bonds included in Level 3 are classified as such because these securities are primarily within illiquid markets and/or priced by independent brokers.

1 The following table presents assets carried at fair value by hierarchy level:

June 30, 2022				
(Amounts in thousands)	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Total
a. Assets accounted for at fair value				
Separate Account assets	\$ 13,003		\$ —	\$ 13,003
Total assets accounted for at fair value	\$ 13,003	\$ —	\$ —	\$ 13,003
b. Liabilities accounted for at fair value				
N/A	\$ —	\$ —	\$ —	\$ —
Total liabilities accounted for at fair value	\$ —	\$ —	\$ —	\$ —

Fair values and changes in the fair values of Separate Account assets generally accrue directly to the policyholders and are not included in the Company's revenues and expenses or surplus.

Valuation Techniques, Procedures and Controls

The Company determines the fair values of certain financial assets and liabilities based on quoted market prices where available and where prices represent reasonable estimates of fair value. The Company also determines fair values based on future cash flows discounted at the appropriate current market rate. Fair values reflect adjustments for counterparty credit quality, the Company's default spreads, liquidity and, where appropriate, risk margins on unobservable parameters.

The fair value process is monitored by the Valuation Committee of the Company's investment manager, which is a cross-functional group of senior management that meets at least quarterly. The purpose of the committee is to oversee the pricing policy and procedures by ensuring objective and reliable valuation practices and pricing of financial instruments as well as addressing valuation issues and approving changes to valuation methodologies and pricing sources. There are also two working groups under the Valuation Committee of the Company's investment manager, a Securities Valuation Group and a Derivatives Valuation Group, which include various investment, operations, accounting, compliance and risk management professionals that meet on a regular basis, to review market data trends, pricing and trading statistics and results, and any proposed pricing methodology changes.

In addition, the Finance and Investment Committee of the Company, co-chaired by its Chief Investment Officer and Chief Financial Officer, is responsible for the approval and monitoring of the Valuation Policy of the Company as well as the adjudication of any valuation disputes thereunder. The Valuation Policy addresses valuation of all financial instruments held in the general account and guaranteed separate accounts of the Company, including all derivative positions. The Finance and Investment Committee meets regularly, and its members include a cross-functional group of senior management as well as various investment, accounting, finance, and risk management professionals.

The Company also has an enterprise-wide Operational Risk Management function which is responsible for establishing, maintaining and communicating the framework, principles and guidelines of the Company's operational risk management program. This includes model risk management which provides an independent review of the suitability, characteristics and reliability of model inputs as well as an analysis of significant changes to current models.

Bonds and Stocks

The fair values of bonds and stocks in an active and orderly market (e.g., not distressed or forced liquidation) are determined by the Company's investment manager using a "waterfall" approach utilizing the following pricing sources: quoted prices for identical assets or liabilities, prices from third-party pricing services, independent broker quotations, or internal matrix pricing processes. Typical inputs used by these pricing sources include, but are not limited to, benchmark yields, reported trades, broker/dealer quotes, issuer spreads, benchmark securities, bids, offers, and/or estimated cash flows, prepayment speeds, and default rates. Most bonds do not trade daily. Based on the typical trading volumes and the lack of quoted market prices for bonds, third-party pricing services utilize matrix pricing to derive security prices. Matrix pricing relies on securities' relationships to other benchmark quoted securities, which trade more frequently. Pricing services utilize recently reported trades of identical or similar securities making adjustments through the reporting date based on the preceding outlined available market observable information. If there are no recently reported trades, the third-party pricing services may develop a security price using expected future cash flows based upon collateral performance and discounted at an estimated market rate. Both matrix pricing and discounted cash flow techniques develop prices by factoring in the time value for cash flows and risk, including liquidity and credit.

Prices from third-party pricing services may be unavailable for securities that are rarely traded or are traded only in privately negotiated transactions. As a result, certain securities are priced via independent broker quotations which utilize inputs that may be difficult to corroborate with observable market based data. Additionally, the majority of these independent broker quotations are non-binding.

The Company's investment manager utilizes an internally developed matrix pricing process for private placement securities for which the Company is unable to obtain a price from a third-party pricing service. The process is similar to the third-party pricing services. The Company's investment manager develops credit spreads each month using market based data for public securities adjusted for credit spread differentials between public and private securities which are obtained from a survey of multiple private placement brokers. The credit spreads determined through this survey approach are based upon the issuer's financial strength and term to maturity, utilizing independent public security index and trade information and adjusting for the non-public nature of the securities. Credit spreads combined with risk-free rates are applied to contractual cash flows to develop a price.

The Company's investment manager performs ongoing analyses of the prices and credit spreads received from third parties to ensure that the prices represent a reasonable estimate of the fair value. In addition, the Company's investment manager ensures that prices received from independent brokers represent a reasonable estimate of fair value through the use of internal and external cash flow models utilizing spreads, and when available, market indices. As a result of these analyses, if the Company's investment manager determines that there is a more appropriate fair value based upon the available market data, the price received from the third party is adjusted accordingly and approved by the Valuation Committee of the Company's investment manager.

The Company's investment manager conducts other specific monitoring controls around pricing. Daily, weekly and monthly analyses identify price changes over pre-determined thresholds for bonds and equity securities. Monthly analyses identify prices that have not changed, and missing prices. Also on a monthly basis, a second source validation is performed on most sectors. Analyses are conducted by a dedicated pricing unit that follows up with trading and investment sector professionals

NOTES TO FINANCIAL STATEMENTS

and challenges prices with vendors when the estimated assumptions used differs from what the Company's investment manager feels a market participant would use. Examples of other procedures performed include, but are not limited to, initial and ongoing review of third-party pricing services' methodologies, review of pricing statistics and trends and back testing recent trades.

The Company's investment manager has analyzed the third-party pricing services' valuation methodologies and related inputs, and has also evaluated the various types of securities in its investment portfolio to determine an appropriate fair value hierarchy level based upon trading activity and the observability of market inputs. Most prices provided by third-party pricing services are classified into Level 2 because the inputs used in pricing the securities are observable. Due to the lack of transparency in the process that brokers use to develop prices, most valuations that are based on brokers' prices are classified as Level 3. Some valuations may be classified as Level 2 if the price can be corroborated with observable market data.

Valuation Inputs for Separate Account Assets

Separate Account assets are primarily invested in mutual funds but also have investments in bonds and stocks. For Level 1 investments, valuations are based on observable inputs that reflect quoted prices for identical assets in active markets that the Company has the ability to access at the measurement date.

For the Separate Accounts' Level 2 bond securities, typical inputs used by pricing techniques include, but are not limited to, benchmark yields, reported trades, broker/dealer quotes, issuer spreads, benchmark securities, bids, offers, and/or estimated cash flows, prepayment speeds, and default rates.

B. Other Fair Value Disclosures

Not applicable.

C. Fair Values for All Financial Instruments by Levels 1, 2 and 3

The tables below reflect the fair values and admitted values of all admitted assets and liabilities that are financial instruments excluding those accounted for under the equity method (joint ventures and partnerships). The fair values are also categorized into the three-level fair value hierarchy as described in Note 20A.
